

CLIMATE ENGAGEMENT SERIES 2

Learn about the sources of climate change emissions and climate hazards in our region and how they impact us.

Climate change impacts us all. By the end of this century:

Almost three additional months of extremely hot days (over 100 F) each year.

Droughts could become more common, with longer periods without rain.

There will be more days with extreme rainfall, which could lead to flooding.

The number of days with high wildfire risk may increase

What are potential Green House Gas (GHG) reduction targets we could pursue to halt Climate Change? U.S. Environmental Protection Agency recommends these targets to reduce Greenhouse Gases (GHG) and tackle climate change:

1. GHG emissions reduced 50% below 2005 levels by 2030
2. Net-zero GHG emissions by 2050

HOW CAN THIS CLIMATE ACTION PLAN HELP OUR COMMUNITY?

Create pathways to green jobs.

Lower utility bills and transportation costs.

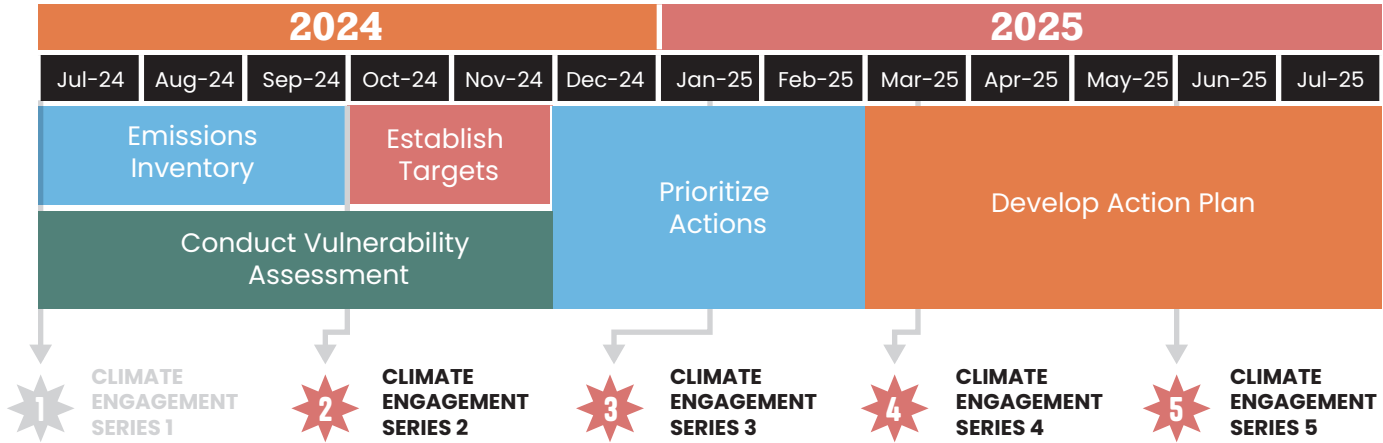

Add more open spaces and vegetation. And protect the desert and the ecosystem.

Improve air quality for all.

GET INVOLVED!

Get involved! The overall project is anticipated to be complete by fall of 2025. There will be five community touchpoints where as a community member you can learn about the project progress and give us your input and feedback.

SERIES 1	Complete
SERIES 2	We are Here!
SERIES 3	Learn more about the regional greenhouse gas projections and reduction goals. During this session, we'll present the suggested greenhouse gas reduction targets for the future and initial ideas to reduce them.
SERIES 4	Join us to explore the proposed actions that the region will take to reach the greenhouse gas reduction goals. We'll discuss strategies for both reducing regional emissions and adapting to climate change.
SERIES 5	During this session, we'll offer a comprehensive overview of how each climate action could unfold, including the responsible implementation partner, timing of implementation, beneficiaries of each action, and more. We'll also discuss the expected outcomes for the region if all strategies are successfully implemented.

The Chihuahuan Desert Climate Collaborative (CDCC) comprises of all key stakeholders in El Paso and Hudspeth counties committed to building a sustainable future! It includes 10 municipalities, 2 counties, 15 census-designated places and unincorporated communities. It also includes non-profit, academic, business partners and others.
